

JOSE LUIS MONTEZA MILIAN

BACKEND / FULL-STACK DEVELOPER — .NET (C#) · REACT · TYPESCRIPT

Lima, Peru (GMT-5, overlaps US time zones) · **Seeking:** Backend or Full-Stack .NET — remote (LATAM contractor or full-time)

Email: joseluismontezamilian12@gmail.com · **Phone / WhatsApp:** +51 913 504 270

LinkedIn: linkedin.com/in/joseluismonteza · **GitHub:** github.com/joseluismontezamilian12-rgb

Portfolio: joseluismontezamilian12-rgb.github.io/portafolio-frontend · **Live API:** supplychaincore-api-lnxj7c.azurewebsites.net

PROFESSIONAL SUMMARY

Backend-focused full-stack developer in C#/.NET and React/TypeScript: REST APIs with Clean Architecture, EF Core, JWT/RBAC security and unit testing with xUnit and Moq. Systems Engineering student who moved into software after 3+ years leading retail operations teams, so my projects attack problems I have owned first-hand: inventory, shrinkage and demand planning. Most recent: **Odontario**, my own SaaS for dental practices, in production with **129 automated tests**, and a TypeScript engine with **176 tests** that automated the daily production-allocation decision across a network of **7** kitchens. Today I provide IT support to Peru's National Elections Jury (JNE) and deliver freelance projects in Node.js.

CORE SKILLS

- **Languages:** C#, TypeScript, JavaScript (ES6+), SQL, HTML5, CSS3
- **Backend:** .NET 10 / .NET 8, ASP.NET Core Web API, Minimal APIs, Entity Framework Core, REST API design, Clean Architecture, Repository Pattern, DTOs, LINQ, async/await, SOLID, JWT authentication, role-based authorization (RBAC), PBKDF2 password hashing, service-to-service HTTP integration, Node.js, Express
- **Frontend:** React 19, Vite, Recharts, responsive design
- **Databases:** SQL Server, Azure SQL, Redis, SQLite, EF Core Migrations, relational data modeling, data seeding
- **Testing & Quality:** xUnit, Moq (unit testing, dependency mocking), Node test runner, Playwright, Swagger / OpenAPI, CI with GitHub Actions
- **Tools & Practices:** Git, GitHub, GitFlow, CI/CD, Docker, Azure App Service, Railway, Visual Studio, VS Code, Agile / Scrum
- **AI-assisted engineering:** GitHub Copilot, Cursor, Claude Code, prompt engineering
- **Business systems:** SAP (inventory & logistics), Kronos (workforce management)

ENGINEERING PROJECTS

Odontario — Management SaaS for Dental Practices (own product)

2026 – Present

Site: odontario.up.railway.app · **Public demo:** odontario-demo-production.up.railway.app · private code

Stack: TypeScript, Node.js 24, Express 5, SQLite, React 19, Vite, Docker, Railway

- **Designed, built and run in production** for practices with 1 to 3 dentists, sold by subscription: appointments, clinical records under Peru's NTS 139 with ICD-10, an odontogram following NTS 188, quotes, payments and cash register, specialist payouts; self-service sign-up with a 15-day trial.
- Data isolated per practice and role-based permissions (reception never sees the clinical record); money stored in cents; per-account login throttling and a login response that does not reveal which emails exist.
- Daily backup encrypted with **AES-256-GCM** to another data centre through a hand-written S3 client (SigV4 signing, no libraries), a restore drill and a health endpoint monitored every 5 minutes; **129 automated tests**.

SupplyChainCore — Inventory & Supply Chain System (Full-Stack)

github.com/joseluismontezamilian12-rgb/SupplyChainCore-FullStack · **Live API + Swagger:** supplychaincore-api-lnxj7c.azurewebsites.net

Stack: C# / .NET 10, ASP.NET Core Web API, EF Core, Azure SQL, JWT, React + Vite, Recharts, xUnit, Moq, Docker, Azure App Service

- **Immutable transactional inventory ledger:** validates stock in real time and rejects any operation that would create a negative balance before persisting — enforced in the service layer, never in the UI.
- **JWT authentication with role-based authorization:** passwords hashed with PBKDF2-HMAC-SHA256 (100k iterations, per-user salt, constant-time comparison); ledger writes restricted to the *Admin* role, and movement authorship read from the token claim rather than the request body.
- Clean Architecture across four projects (Domain / Application / Infrastructure / WebApi) with Repository Pattern, DTOs and EF Core migrations, plus a React dashboard; **57 unit tests** (xUnit + Moq) run by CI on GitHub Actions on every push.

ECommerceEcosystem — Distributed Backend (Catalog + Basket Services)

github.com/joseluismontezamilian12-rgb/ECommerceEcosystem · **Live:** ecommerce-catalog-lnxj7c.azurewebsites.net · ecommerce-basket-lnxj7c.azurewebsites.net

Stack: C# / .NET 10, ASP.NET Minimal APIs, EF Core, Azure SQL, Redis, Swagger, Azure App Service

- Two independently deployable services — Catalog.API (Azure SQL) and Basket.API (Redis) — communicating over synchronous HTTP; immutable *records* as domain entities and DTOs to decouple contracts. **Both deployed and open to public testing.**
- **Server-side price verification:** the basket re-fetches every item from the catalog and overwrites the name and price sent by the client. Post a 1,200 laptop priced at 1.00 and the API answers 1,200.

Merma AI — Inventory & Shrinkage Control for Food Retail (React SPA)

github.com/joseluismontezamilian12-rgb/merma-ai · Live demo: joseluismontezamilian12-rgb.github.io/merma-ai

Stack: React 19, Vite, localStorage, GitHub Pages

- **Built for a real store and piloted there** against its full **78-SKU** catalog — the public repo ships a sanitized demo dataset. Recommends how much to order from real consumption (ordered – shrinkage) minus current stock, justified per order; deterministic, explainable logic.

SOFTWARE DEVELOPMENT EXPERIENCE

National Elections Jury of Peru (JNE) — IT Support, Lima

Sep 2026 – Present

Service contract · Collections Office · 2026 Regional and Municipal Elections

- IT support for the rollout of **MGIC** (Integrated Collections Management Module) for the Collections Office, with four deliverables over 113 days under terms of reference.

INDIGO TAROT — Freelance Developer (Node.js)

Aug 2026 – Present

«Astro IA» — TikTok live-stream automation · **Stack:** Node.js, TikTok LIVE integration, speech synthesis

- End-to-end *comment* → *reply* → *voice* → *avatar* pipeline, built as independent modules tested in isolation: comment and gift reader, filters, priority queue, in-character reply engine, speech synthesis and an on/off control panel.
- Per-stream cost counter to cap API spend, and a control panel the client runs without technical knowledge.

Manzana Verde — Full-Stack Developer, Lima

Jul 2026 – Sep 2026

Food-tech: healthy meal plans · 1.4M+ orders · Peru, Mexico, Colombia · **Stack:** TypeScript, Node.js, Playwright, SQL

- **Automated the daily production-allocation decision** across a network of **7** partner kitchens, until then made by hand. **Impact quantified against 25 days of real order data; figures not cleared for publication, discussed in interview.**
- Each kitchen is scored on operational performance and demand is routed by district adjacency under hard capacity caps, with every assignment traceable to the data that produced it.
- Built as a reusable **TypeScript** library exposed through a CLI, an API and a web screen, with **176 automated tests**; the business team tunes capacity, adjacency and demand in editable files, without a deployment. SQL queries over the *data lake* feed the demand models.
- **Prospecting scraper** in Node.js + Playwright: walks Google Maps by locality, extracts each venue's data, filters by rating and tells mobile from landline; exports CSV and an HTML report per zone. Replaced the manual search.

Pickadeli (MANQA Inversiones S.A.C.) — Full-Stack Developer, Lima

Apr 2026 – Jul 2026

Fast-casual salad chain · **Stack:** React, JavaScript, localStorage

- **Built and piloted "Merma AI"**, a self-developed React tool, against the store's real **78-SKU** catalog — cross-checking warehouse stock, orders and shrinkage to recommend how much to order. Gathered requirements with the end users, put it into production in the store and iterated on it through daily use.

Kavea Travel — Freelance Web Developer

Jun 2026

Travel agency · **Stack:** HTML5, CSS3, responsive design

- Three-page site hand-coded from the client's *brandboard*, responsive with breakpoints at 1100 px and 768 px; delivered ready to publish.

PRIOR OPERATIONS EXPERIENCE

Operations & Reporting Automation — Retail and Food Service, Lima

May 2019 – Apr 2026

Boba Station (Boba Enterprises S.A.C.) · Plaza Vea (Compañía Food Retail S.A.C.) · Ten Ren Bubble Tea · Chinawok / Bambos · COESTI "Listo"

- **Automated the store's operational data flows** — daily sales, inventory, shrinkage and management reports — replacing manual consolidation with structured, repeatable workflows. That is what led me into software development.
- Ownership of sales KPIs, cash control and inventory, leading teams of **15 to 30** people; audits of a supermarket section with **thousands of SKUs**; daily work on **SAP** (shrinkage and inventory) and **Kronos** (workforce scheduling).

EDUCATION

- **B.Eng. Systems Engineering — Universidad Privada del Norte (UPN), Lima** · 2025 – present. Relevant coursework: Software Design & Architecture, Advanced Data Structures, Advanced Databases, Agile Methodologies.
- **Accounting (technical program) — Certus, Lima** · 2020 – 2021.

LANGUAGES

- **Spanish** — Native · **English** — Intermediate (B1), async-first: fully comfortable in written technical English (pull requests, documentation, tickets, daily technical reading); functional conversation, actively improving.
