

JOSE LUIS MONTEZA MILIAN

FULL-STACK DEVELOPER — .NET (C#) · REACT · TYPESCRIPT

Lima, Peru (GMT-5, overlaps US time zones) · Open to remote work

Email: joseluismontezamilian12@gmail.com · **Phone / WhatsApp:** +51 913 504 270

GitHub: github.com/joseluismontezamilian12-rgb · **Portfolio:** joseluismontezamilian12-rgb.github.io/portafolio-frontend

LinkedIn: linkedin.com/in/jose-luis-monteza-milian-8b5835328

PROFESSIONAL SUMMARY

Full-stack developer focused on C#/.NET 10 and React/TypeScript: REST APIs with Clean Architecture, JWT/RBAC security, and unit testing with xUnit and Moq. I moved into software after 3+ years managing high-volume retail operations (SAP, Kronos), so my projects target business problems I have owned first-hand: inventory control, loss prevention, and demand planning. Most recent work: a demand-allocation algorithm for a food-tech startup that cut modeled daily logistics costs by ~19% against real order data. AI-augmented workflow (GitHub Copilot, Cursor, Claude Code, Gemini API). Systems Engineering student, 6th semester.

CORE SKILLS

- **Languages:** C#, TypeScript, JavaScript (ES6+), SQL
- **Backend:** .NET 10, ASP.NET Core Web API, Minimal APIs, Entity Framework Core, REST API design, JWT authentication, RBAC, Microservices, Clean Architecture, Repository Pattern, DTOs
- **Frontend:** React, Vite, Redux Toolkit, Tailwind CSS, Recharts, responsive design
- **Databases:** SQL Server, PostgreSQL, Redis, Supabase, EF Core Migrations, data seeding
- **Testing & Quality:** xUnit, Moq (unit testing, dependency mocking), Swagger / OpenAPI
- **Tools:** Git, GitHub, GitFlow, Visual Studio, VS Code, Agile / Scrum
- **AI-assisted engineering:** GitHub Copilot, Cursor, Claude Code, Google Gemini API (LLM integration), prompt engineering
- **Business systems:** SAP (inventory & logistics), Kronos (workforce management)

ENGINEERING PROJECTS

SupplyChainCore — Inventory & Supply Chain System (Full-Stack)

github.com/joseluismontezamilian12-rgb/SupplyChainCore-FullStack

Stack: C# / .NET 10, ASP.NET Core Web API, EF Core, SQL Server, React + Vite, xUnit, Moq

- Immutable transactional ledger for inventory: validates stock in real time and rejects any operation that would create a negative balance before persisting.
- Clean Architecture (Domain / Application / Infrastructure / WebApi) with Repository Pattern and DTOs; JWT authentication plus role-based access control (RBAC) on sensitive endpoints.
- Application layer covered by unit tests with xUnit and Moq (mocked dependencies).

ECommerceEcosystem — Distributed Microservices Backend

github.com/joseluismontezamilian12-rgb/ECommerceEcosystem

Stack: C# / .NET, ASP.NET Minimal APIs, SQL Server, EF Core, Redis, Swagger

- Two independent services — Catalog.API (SQL Server) and Basket.API (Redis) — communicating synchronously over HTTP.
- Server-side price verification between services neutralizes client-side price manipulation.
- Immutable records as domain entities, DTOs to decouple service contracts, automated data seeding via EF Core migrations.

ECS Dashboard — Real-Time Simulation Monitor (React SPA)

github.com/joseluismontezamilian12-rgb/ecs-dashboard · Live demo: joseluismontezamilian12-rgb.github.io/ecs-dashboard

Stack: React 19, Vite, Tailwind CSS 4, HTML5 Canvas, GitHub Pages

- Retro-terminal UI monitoring a simulated Entity-Component-System core in real time: live iteration counter (60 Hz target) with memory-allocation and latency readouts.
- Canvas-based rendering kept responsive under continuous real-time state updates; automated GitHub Pages deployment.

PROFESSIONAL EXPERIENCE

Manzana Verde — food-tech startup (healthy meal plans; Peru · Mexico · Colombia), Lima Apr 2026 – Present
Operations Coordinator (in role since Jul 2026)

- Coordinate daily production and delivery operations across a network of 7 partner kitchens in Lima: capacity planning, SLA compliance, and quality-incident follow-up.
- Designed and validated a demand-allocation algorithm that assigns daily production quotas across the kitchen network by crossing historical SLA metrics, quality incidents, physical capacity caps, and a geographic adjacency matrix.
- Benchmarked against real July 2026 order data: ~19% lower modeled daily logistics cost and ~46% fewer dishes routed to kitchens with critical quality flags, with every allocation decision traceable.

Pickadeli — Store Manager, Lima Oct 2025 – Apr 2026

- Ran daily operations of a high-volume food retail store, leading 15–30 staff across shifts with full ownership of sales KPIs, cash control, and inventory.
- Built daily shrinkage and supply audits on back-office data, catching stock variances before monthly inventory close in a perishables-heavy category.

Plaza Vea (Compañía Food Retail S.A.C.) — Section Manager, Lima Mar 2025 – Sep 2025

- Led logistics and operational audits for a supermarket section handling thousands of SKUs; preventive analysis of system movements to stop pre-inventory variances.
- Planned schedules and staffing allocation under resource-optimization criteria.

Additional operations & sales roles — Alert del Perú · Metas Perú (short-term contracts), Sep 2024 – Jan 2025
Lima

Ten Ren Bubble Tea — Shift Supervisor, Lima Sep 2023 – Sep 2024

- Quality control of operational reports, cash reconciliation, and stock audits; staff scheduling in Kronos.

Earlier roles — Chinawok / Bambos (SAP: shrinkage logging, real-time inventory, Mar–May May 2019 – May 2023
2023) · COESTI "Listo" convenience stores (Jan 2022 – Feb 2023) · fuel-station services (2019), Lima

EDUCATION

- **B.Eng. Systems Engineering — Universidad Privada del Norte (UPN), Lima** · 2024 – present (6th semester, expected 2028). Relevant coursework: Software Design & Architecture, Advanced Data Structures, Advanced Databases, Agile Methodologies.
- **Accounting (technical program) — Certus, Lima** · completed through 5th semester.

LANGUAGES

- **Spanish** — Native
- **English** — Intermediate (B1): strong written English (daily technical reading and writing); conversational speaking.
